

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

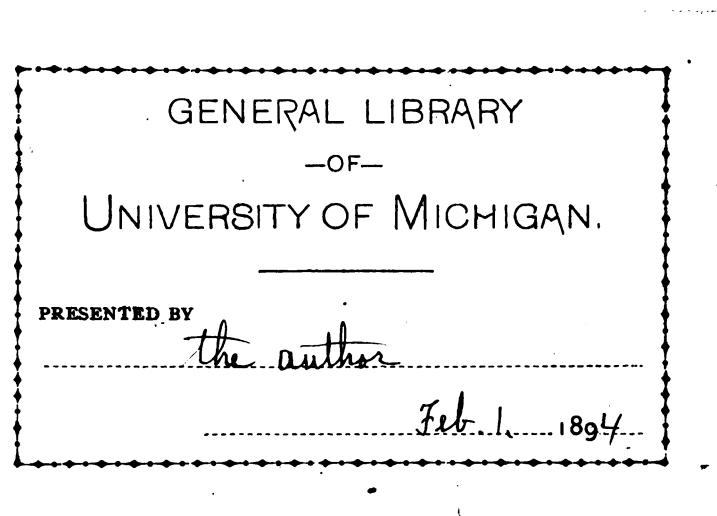

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## CORRIGENDA.

---

p. 12, below, read 'a in *what*', not 'o in *what*'.

p. 14, Note, line 2, read § 7, not § 37.

p. 15, (g), line 3, read *Iulian* 340.

p. 17, § 4, line 2, read 'slēpen 10'.

    N<sup>o</sup>, line 3, read § 23, not § 18.

    line 5, read § 32, not § 27.

p. 18, § 5, line 2, read *inspired*.

    Note, last line, read § 32, not § 27.

p. 19, § 7, last line, read *qu*, not *qr*.

    § 8, line 4, read *Iulian*.

p. 20, line 2, read § 2 h, not *z* h.

    last word should be 'dō', not 'do'.

p. 21, § 9, 2, line 2, read 'them', not 'it'.

p. 25, line before last, read *ū*, not *ü*.

p. 26, Note 1, line 3, read 'the long vowels ī and ū (not so generally ē and ð) still.'

    § 15, line 5, cross out 'and *ū*'.

    line 6, cross out 'statue 83, *Julian* 340.'

p. 30, 5 end, read § 32, not § 27.

p. 35, § 33, 2, line 2, read 'quath' not 'queth'.

## PREFACE.

---

There are various ways of reading Chaucer. Not a few attempt to read the works of the Middle-English poet as though they were written in the speech of to-day, and succeed in getting a disjointed jargon that is neither poetry nor prose. Others pronounce the vowels approximately as in German, and, slipping in or leaving out enough e's to give a passable rhythm, revel in the glamour of a bogus antiquity. Still others, and they mostly foreigners, strive, with more or less success, to attain a scientific reproduction of the speech of the poet. It is my pleasant duty each year to introduce a hundred odd students to the study of Chaucer; and, much as I despise the naïve and the capricious methods of reading the poet's works, I shrink from imposing a minute study of Middle-English phonology upon a class of undergraduate students, lest at the end of the brief time allotted the subject they find they have the shell but not the kernel.

Still, in these matters one is largely limited by the books in the market. The *Prolog* and *The Knight's Tale* doubtless form the most acceptable pieces for undergraduate students, though the *Tale* does get rather long before it ends; and the Morris-Skeat edition, in spite of its weaknesses, is the best text with a glossary. But the student is there referred to Skeat's edition of another poem for a treatment of the subject of pronunciation, and this is found to be based upon the idiosyncrasies of an inferior MS and to require the gentle correction of Prof. Skeat. I use the Morris-Skeat

book, but I have found that the introduction to the subject is made at a much more rapid pace and in a far more satisfactory manner by the aid of the marked texts in Sweet's *Second Middle-English Primer*. Sweet's excellent treatment of the pronunciation offers, however, unnecessary difficulties to non-philological students; while the choppy and inadequate presentation of the subject in Skeat's echo\* of Sweet's Primer is quite unsatisfactory. I have therefore tried to meet the needs of my students in this little book, and shall use along with it Sweet's Primer, to be followed by the Morris-Skeat book.

My aim at first was to print but half a dozen pages; as it is, I have not put in anything that I do not try to have my young people master. Others may find it advisable to omit or postpone some sections. Still others may deem it necessary to neglect some of the distinctions I have made: to sound  $\mathfrak{e}$  like  $\mathfrak{e}$  or even  $\mathfrak{ay}$  like  $\mathfrak{ey}$ , and to pronounce the words in § 33, 2, and perhaps even those containing  $\mathfrak{eu}$  and  $\mathfrak{ü}$  as in M<sup>n</sup>E. Surely the failure to prolong double consonants (§ 39) need not be considered a serious matter in the case of the ordinary student. But I should think it folly to ignore the difference between  $\mathfrak{Q}$  and  $\mathfrak{O}$ , which has its counterpart in M<sup>n</sup>E. The section treating of the Relation of ME Vowels to M<sup>n</sup>E Vowels is meant to be of practical use in acquiring the right pronunciation of the ME vowels, especially when the student uses an unmarked text.

I have taken pains to cite instances of nearly every word mentioned, if possible, in the *Prolog* or *The Knight's Tale*. The spelling is, with rare exceptions, that of the Ellesmere MS; the numbers refer to the lines in the Six-Text Edition, which for the *Prolog* accord with the numbering in Sweet and Skeat, and for *The Knight's Tale* will be found in brackets in Skeat's edition.

---

\* School Edition of Chaucer's Prologue, Oxford, 1891.

I have stuck closely to the matter of spelling and pronunciation; but, should my treatment of the subject prove to be of use to others, I hope to find time to prepare an Introduction to the Study of Chaucer that will aim to meet the wants of American students.

GEORGE HEMPL.

Ann Arbor, October 1, 1893.

## TERMS, ABBREVIATIONS, SIGNS, &c.

§ 1. 1) A *voiced consonant* is one made while the vocal chords are vibrating: *b, l, w, g, &c.*

A *voiceless consonant* is one made while the glottis is wide open and the vocal chords silent: *p, s in so, t, f, &c.*

A *whispered consonant* is one made while the vocal chords are contracted but not put into vibration, like M<sup>n</sup>E *is, his, with, of, &c.* at the end of a sentence, cf. § 33, 2.

If the tongue is pressed forward during the formation of a vowel, it is called a *front vowel*: *e, i or y, ü*; if drawn back, a *back vowel*: *a, o, Q, u.*

A vowel is said to be *low, mid, or high*, according as the tongue is lowered a good deal, but moderately, or very little: *i, ü, and u are high vowels; e and Q are low vowels; the rest are mid vowels, e and Q are also called open vowels when compared with the close mid vowels ē and ö.*

2) OE Old English (= "Anglo-Saxon").

ME Middle English.

M<sup>n</sup>E Modern English.

The transition from OE to ME was in the 12th Century, that from ME to M<sup>n</sup>E in the 15th century.

OF Old French.

M<sup>n</sup>F Modern French.

E Ms The Ellesmere manuscript.

C The Complaint to Pity.

FA The Former Age.

P The Pardoners Tale.

All other references are to the *Prolog* or *The Knight's Tale*, the numbers being those of the lines in the Six-Text Edition (also given in Sweet and Skeat).

(3) Letters in italics are almost invariably phonetic signs; the following may need explanation:

sh	the sound of sh in <i>she</i> .
ch	“ ch “ <i>church</i> .
s	“ s “ <i>pleasure</i> .
j	“ j and g in <i>joy, gin</i> .
a	“ a in <i>hat</i> .
a	“ a in <i>artistic</i> .
ā	“ a “ <i>art</i> .
au	“ ow in <i>now</i> .
ai	“ ai in <i>aisle</i> .
u	“ u in <i>full</i> .
ū	“ u in <i>rude</i> .
iū	“ u in <i>use</i> .
e	“ e in <i>met</i> .
ē	“ e in <i>there</i> .
ā	“ a in <i>idea</i> , § 4 Note.
ā	“ e in <i>her</i> .
ū	“ u in <i>hut</i> .
ō	“ o in <i>what</i> .
ō	“ o in <i>or</i> .

For ē or ei and ô or ou cf. § 14 Note 1, also p. 17 ft. nt. and p. 18 ft. nt. For the ME. letters with diacritical marks see §§ 3-8, 28, 1.

> is a sign meaning “becomes” or “became.”

### GENERAL REMARKS ON ME. SPELLING, &c.

---

§ 2. In considering the spelling and pronunciation of Middle English we must remember that the language contained French elements incorporated with the native English; that the English of that time was in some respects like Old English and in others more like Modern English, while the French elements had come into the language from Old French and consequently were more like that than like Modern French; and, furthermore, that in Middle-English times the Old-French system of spelling was in vogue in England. Old French was, of course, derived from Latin, but essential changes had taken place in the pronunciation, and students who have learned Latin according to the Roman method of pronunciation will have to be very careful not to introduce this into Middle English. On the other hand, those that are familiar with Modern French pronunciation must guard against using this in Middle English.

(a) Thus the OE word *ut* was pronounced just the same in ME as in OE, but as the sound of long *u* (M<sup>n</sup>E "oo" in "spool") was represented by "ou" in French, the word was spelled "out" in ME, which spelling has been retained in M<sup>n</sup>E though the long *u* has become the diphthong *au*. While *ow* was often used for *ou* (§ 2 e), the sound was just the same. But there was a diphthong in native words which too was spelled *ou* or *ow*; this may be distinguished from the long vowel by the fact that while the vowel has now become *au* (thou, how), the diphthong *ou* or *ow* is still pronounced

with an ɔ or ɔ̄ sound (though 68, sōwed 685, thoughte 385). Dr Sweet's text also helps the learner by leaving the long vowel ou unmarked (thou) and printing the diphthong with an o before gh (thogh) and with a diacritical mark over or under the o in other situations (grōwen, squle).

NOTE. (a) Before gh, (1) the vowel ȳ is almost uniformly written ou (ynough 888) § 37; and (2) u is written o (drōghte 2) § 7 and § 2 c; but (3) the diphthong ou is written not only ou (thoughte 385), but frequently o (oghte 660), and this spelling is uniformly employed by Sweet to avoid confusion with (1) above; § 6 ɔ. (b) Before n the u of ou = ȳ is often omitted (sēson 19, nācions 53), or indicated only by a mark over the n (rēson̄ condicioñ 37).

(b) The letter u (initially v, § 2 f) was, in accordance with French usage, often retained for short ȳ, especially in closed syllables: ful 22, but 74, vntō 71, lusty (cf. however c below); but it was also used for the sound of "u" in French "just", "nature," &c., and is printed by Sweet ll (in imitation of German ü) when short, ñ (ñ would have been better) when long, and û when it had acquired the sound of eu, § 4 N<sup>5</sup>.

(c) As i (which was generally not dotted) and u might easily cause confusion when written next other letters made of similar short straight lines (for ex., n, m, w, u = v), the French usage of writing o for u and y for i in such (and some other) situations was adopted (Sweet prints such an o with a curl above it, ȳ, to suggest a u): yōnge sōnne 7, wōrthy 43, lōued 45, sōmtyme 65, bismōtered 76, observe lōuyere 80 but lusty in the same line; also cōrāges 11, cōppe 134, cōsyn 1234, sōper 348; veyne 3, nyght 10, nyne 24, wyde 28, tyme 35, but usually, "w<sup>t</sup>" (=with) 31, "in" 6. Similarly, I is sometimes used for i next nn: Inne 1618, w<sup>t</sup> Inne 'within' 1669. (d) The letter y was also used for i initially (1) as a capital in proper names: ypocras 431, ypres 448, ypolita 1685, and (2) in participles: yrōnne 8, ywroght 196, ybqre 378. (e) The letters y and w were often used for i and u, especially

finally and next other vowels: query 3, melodye 9, day 19, felaweshipe 26, yow 38, vnknqwe 126, trōwe 155; also next n, m, w, u = v, &c.: veyne 3, Lyeys 58, slain 63, knyght 43, wyped 133, ferthyng 134, pleyyng 1061, lyuen 335; and elsewhere: bawdryk 116, tretys 152.

(f) The letter v was used initially for v and the vowel u: veyne 3, verray 338, venerie 166, Vēnus 1918, vertū 4, vil-eynye 70, victqrie 872, vnder 106, vs 411, vntō 225, vpon 1036, &c.; while u was used medially for both sounds: query 3, deuout 22, deuyse 34, haue 35, reuerence 305, lyuen 335, &c. Medial v is rare in the E Ms: aventure 25, qeverychqn 31, avañce 246, envyned 342, &c. Cf. note to k below. (g) The letter I was used not only as a capital i: I 34, It 155, &c., (cf. also c end); but also for the consonant j, both small and capital: Iūlian 34, Iuste 96, Ierusalem 463, Ianglere 560, Ialous 1329, Iapes 705, &c. J and i for j are rare in the E Ms: Jūno 1329, iaped 1729.

NOTE.—The fact that j occurred only initially and that initial v was in fact much more frequently a consonant than a vowel (see the examples above) led to their complete differentiation ("v" and "j" consonants, "u" and "i" vowels); this differentiation is also made by Sweet in his *Second Middle-English Primer* and generally by Skeat.

(h) To distinguish the open long e and o from the close, it is customary to print the former ē and ē and the latter ɔ and ɔ. It will, thus, be observed that not only a straight mark above a vowel, but also a hook under it, indicates a long vowel, but the hook also shows that the vowel is open. If, as is often the case, a long vowel is doubled in the Ms, there is no need of a long mark over it: degree 40, tō doon 78; but the hook is necessary if the vowel is open: brēþth 5, gqon 12. In the MSS and an unmarked text like Skeat's, both o and oo may stand for ɔ or ɔ, the doubling showing only that the vowel is long, and being only occasionally used.

(i) In OF "g" was pronounced dʒ before front vowels (e,

i or y), and this pronunciation was taken up into ME and is still retained; the learner must not be misled into using in ME the changed pronunciation of M<sup>n</sup>F. The letter j had the same pronunciation. (k) Similarly, "ch" had in OF, as well as in ME and M<sup>n</sup>E, the sound of /tʃ/, and lost the t only in M<sup>n</sup>F. M<sup>n</sup>E has more or less generally changed the pronunciation of a few of these words under the influence of M<sup>n</sup>F usage, for ex., chivalry; but the student of ME must take particular pains to preserve ch as in English *chip*. (l) He must also avoid bringing into ME the French nasal vowels for vowel + n or m; the most successful ME attempt at imitating what there was of this in OF seems to have been the au for nasal a in straunge 13, accordaunt 37, Alisaundre 51, daunce 96, &c.

## THE PRONUNCIATION OF THE VOWELS.

---

§3. *a* was as in *artistic*: Whan that Aprille 1.

*a* was as in *art*: bathed 3, smale 9.

*ai* or *ay* was as in *aisle*: day 19, cōmpaignye 24.

*au* or *aw* was as in *sauerkraut*: straunge 13, lawe 309.

§4. *e* was as in *men*: yet 70, twenty 82.

NOTE 1. Unstressed *e* was pronounced as in German, or nearly like final *a* in M<sup>n</sup> E (for ex., in *idea*) but weaker: soote 1, perced 2, engendred 4. The sound is printed *ə* in books on phonetics. It was, in fact, so weak already in ME times that it generally became quite silent in certain situations, cf. §23.

*ɛ* was as in *they*\*: swēte 5, slēpen.

NOTE 2.—So too *e*, *ɛ*, or *ə* preceded or followed by *i* or *y* (*ie*\*, *ye*, *ɛi*, *ey*, *ɛi*, &c.): chief 1057, *they* 18, *curteiste* 46. But *ie* often = *i* + *ə*, or *i*, when final in French words, §18, s; it = *i* + *e* in *science* 316, *pācient* 415, &c.; and consonantal *i* + *ə* in other cases, cf. §27.

*ə* was as in *there*: brēθ 5, wəren əsed 29.

---

\* Really *ɛ*, *ie*, or *ye* were the long, close *e*-vowel, while *ei*, *ɛi*, *ɛi* were diphthongs ending in *i*. In M<sup>n</sup> E all are pronounced as a diphthong (most distinctly so in southern England, about Philadelphia, &c.) or all are pronounced a pure *e*-vowel (so in Scotland and the larger part of the U. S., at least when not over-long, §14 Note 1); and it is hardly practicable to make general students distinguish the vowel from the diphthong in reading ME.

NOTE 3.—This sound occurs only before *r* in M<sup>n</sup>E and will require attention in other positions in ME. It is practically the sound of “*e*” in *met* prolonged. Cf. § 2 *h*. The poet sometimes rimes it with *e*, cf. § 9.

*ei, ey, &c.*, Note 2.

Eu or ēu = *e* + *u*, now common for *a* + *u* as a dialectic pronunciation of “*ow*” in *cow* &c.: *rēule* 173, *fēwe* 639, *shēwe* C 55.

NOTE 4.—Care must be taken not to substitute *iū* or *ū* for this sound, as in M<sup>n</sup>E. It is most readily acquired by putting one's self in the mood of mocking one who uses the dialectic pronunciation mentioned above; the standard *au* in *cow* is not the sound.

NOTE 5.—The same sound is to be given to *u* (also written *eu*, and printed *ū* by Sweet, § 2 *b*) in an open syllable in French words: *vertū* 4, *vertuous* 251, *letūaries* 426, *Ihesū* 689.

§5. *i* or *y* was as in *pin*: *Aprille* with *hise* 1.

*i* or *y* was as in *machine*: *inspired* 6, *I 20, my 21*.

NOTE.—Skeat generally prints *y* for the long vowel and *i* for the short, except in diphthongs.

For *ie, &c.*, cf. § 4, Note 2. For unstressed *i* or *y* before a vowel cf. § 27.

§6. *o* was as in the New England dialectic pronunciation of *boat, road, stone, &c.*, or like *ö* in German, French, &c., not like M<sup>n</sup>E “short *o*”: of 2, *holt* 6, *croppes* 7.

For *o(gh)* cf. 5; for *ö* cf. § 7.

*ö* was as in *no\**: *anöther* 66, *tö doon* 78. So too *o* or *ou* before *gh* (§ 2 *a* Note), and *ö* or *ö* with following *u* or *w\**: *though* 68, *dough*, *cough*, *trough*, *noght* 768, and

---

\* Really *ö* was the long close *o*-vowel; while *o(u)* before *gh* and *öu* and *ou* were diphthongs ending in *u*. M<sup>n</sup>E has the long *o*-vowel or the diphthong for both (cf. § 14, Note 1), and it is hardly practicable to try to distinguish the ME vowel from the diphthong in ordinary classes.

## THE PRONUNCIATION OF THE VOWELS.

19

verbs like foughten 62, thoughte 385, oghte 660, (a)boght wroght 3099; lqwely 99, sōwed 685.

Q was as in *broad*: spqken ḡeverychqn 31, mQ sQQ 102.

Cf. § 2 h.

oi or oy was as in *boy*: point 114, coy 119.

ōu, qw, &c., cf. ō. For ou = long u, cf. below.

§7. u or w, also ō (§ 2 c), was as in *put*: ful 22, duseyne 578, yelw, yōnge sōnne 7, drōghte 2, dōghty, but cf. § 2 a Note.

For ū cf. § 4, Note 5.

ou or ow was as in *soup*: houndes 146, sownyng 275, Plowman 529; before gh (§ 2 a Note) in ynough 888, Plough 887, bough 1980, swough 1979, slough, tough.

For ū or cf. § 6 ō.

§8. ü was as in German ~~Müller~~\*, or short French "u": brüstles 556, Iüstice 314, süster 1820.

ū or ui was as in German grün\*, or long French "u": nature 11, entūned 123, cūrious 196, Iuiān 340.

y = i, § 5.

NOTE.—It may be well to point out the chief difficulties that the student will meet in pronouncing the ME vowels: (a) Short o may be to him a new and difficult sound (§ 6), and he will have to remember that Sweet's symbol ō — short u and not short o (§ 7). The vowel ū, too, is often found difficult to master (§ 8 and ft. nt.). (b) After learning the values of the ME vowels, he will still be prone to admit certain M<sup>n</sup>E modifications, for ex., to round the vowel a next l or w (§ 20), and to sound e, i, and u, before r as in M<sup>n</sup>E (§ 19 b). (c) He will want to sound eu as to-day, or substitute au (as in cow) for eu (§ 4 N<sup>4</sup> and Preface p. 4). (d) After learning the correct pronunciation of long a, e, i, he will be apt to use it for short a, e, i, though thus departing from both ME and

---

\* Ger. grün and ~~Müller~~ are like Eng. *green* and *miller*, but the lips are nearly closed—or "rounded"—during the formation of the vowel.

**M<sup>ñ</sup>E** usage. (e) He will be apt to confound ai ay with ei ey (§ 15 N and Preface p. 4), and q with ö (§ 6, 2h, and Preface p. 4). (f) One is most apt to be careless with unstressed syllables, for example, to say tu dö for tö dö.

## IMPERFECT RIMES, &c.

§ 9. Chaucer was a careful rimer but allowed himself certain liberties.

1) The open sounds occasionally rimed with the close, and the spelling was usually changed to suit: *yēr sōpēr* 347, *weel dēl* 367, *lēne ysēne* &c. 591, 660, *twō dō* 1039\*, *mō tō* 2725, *anqn ydōn* 1025, *Seē bē 60*, *spēche tēche* 307, *dogēre spēre* 113. Similarly, *ai* and *ei* are occasionally rimed, and *ai* had doubtless begun to approach *ei* in popular pronunciation (the spelling generally rimes too): *way* (for *wey*) *day* 1413, 1481, &c., *agayn playn* (for *pleyn*) 1092, *pleyn ageyn* (for *agayn*) 1488, but *agayn slayn* 1741. And there are other impure rimes: *al sendāl* 440, *wēl catel* 540, *mōneye twēye* 703, *fynde Inde* P. 75. Different consonants are rarely joined in rime: *sāuith Significāuit* 662.

2) The pronunciation, and usually the orthography, of foreign names was fearlessly twisted to make it rime with native words or suit the metre: thus, usually *Palamoun* 1070, 1341, &c., but often *Palamon* 1014, 2118, &c.; *Emely'e* 871, but *Emēlyā* 1078; *A'thēn(e)s* 873, *Athē'n(e)s* 1194, *A'thēnes* 973; *Perothē'us* 1202, but *P(e)rō'theus* 1205 'Pirithous'.

3) Diversity of usage in pronunciation was put to use for the same purpose: usually *yēue* 223, but in rime *yīue* 225,

---

\* "Two" must still have had *Q*: in the Knight's Tale "two" rimes with *ō* not more than twice (1039 and perhaps 1705) but with *Q* at least 13 times. Thus 1039 and (?) 1705 are impure rimes like *dō sq 1195*, *doon ēchqn*, *anqn, gqqn 2655, 1025, 2675, 2963, tō mō 2725*.

505; usually *koude* 130, but in rime *kouthe* 390; usually *grque* 1478, 1481, 1505, &c., in rime *grque* 1495, 1507, &c.; there being a dearth of rimes for "live", "grove", &c. Regularly *nQnes* but *nQnys* to rime with *nQn* is 523.

## THE QUANTITY OF VOWELS.

§ 10. The quantity of the OE vowels remained the same in ME except that—

1) Vowels in stressed open\* syllables became long: mā-ken 9, open 10, hāre 191, mēte 127, spēke 462.

NOTE 1.—The high vowels i and u (§1) generally remain short: cōme 23, wōne sōne 335, pp. write 161 (the infinitive had original I, 96) riden 48, cōmen 671, prikyng 191, lōuede 444, lyue 583. As final -e in these cases was silent (§ 23,4), the i, u, was in a closed syllable.

NOTE 2.—(a) Often the inflection or use of a word presents some open\* and some closed syllables and consequently both long and short vowels: smāle 9, smal 153. (b) If the closed syllable constitutes a monosyllable, it sometimes prevails, that is, the vowel remains short throughout and the following consonant is doubled before another vowel: god 1665, goddess 1800, goddesse 1904. (c) If the closed syllable is in a word of more than one syllable (particularly words ending in l, n, r, and i or y), the closed syllable or the open prevails according as the one or the other happened to be most in use in each particular case; usually it was the closed syllable that prevailed: many qqn 317 but, with consonantal y, many a 60, 212, &c., so bisy a 321, bisier 322, studie 303, 438, berye merye 208, bod'yes 942, 944, but bodȳ'es 997. But the open syllable and long vowel prevailed in open 10, ȳevene 83, &c. (d) Occasionally a long vowel is shortened under the same circumstances: crīst 698, but cristen 55.

---

\*A syllable that ends in a vowel is called an *Open Syllable*; one that ends in a consonant, a *Closed Syllable*. A single consonant belongs to the following syllable. Open syllables: tō the roo-te (but the and -te are unstressed); closed syllables: of March hath per-ced.

2) A long vowel in a closed\* syllable usually became short if another consonant was added: *wys* 68, but *wysdōm* 865, *clēne* 133, but *clēnse* 631; still mental association could nullify this rule: *clēnnesse* 506.

---

\* Cf. ft. nt. p. 23.

## RELATION OF ME. VOWELS TO M<sup>n</sup>E. VOWELS.

§ 11. English has always shown a greater tendency to change the sound of its vowels than to change that of its consonants; consequently the pronunciation of the ME vowels differs more than that of ME consonants does from M<sup>n</sup>E usage.

### GENERAL CHANGES.

§ 12. The general changes that have taken place in the pronunciation of English vowels since ME times may be briefly stated as follows. Observe that the ME spelling is often retained in M<sup>n</sup>E.

#### Short Vowels.

§ 13. *a* > *æ*: man 43, bigan 44.

*e* remains *e*: yet 70; wente 78.

*i* " *i*: in 19, rideñ 48.

*ü* > *v*: Caunterbūry 27, stūbtilly 610.

*u* usually > *v*: Vnder 105, lōued 45, ffustiān 75; but often remains *u* between a labial consonant and l: ful 22 wōlf 513.

*o* > *ɔ* or *a*: on 21, of 54, for 13, God 533.

#### Long Vowels.

§ 14. *ā* > *ē* or *ei* (spelled "a"): bāthed 3, pāle 205.

*ē* & *ɛ* > *i* or *ij* (spelled "e", "ee", or "ea"): mē ech 39, slēues 93.

*i* > *ai* (spelled "i" or "y"): rideñ 45, thy 1283.

*ü* (printed *u* by Sweet when not written *ui* or *uy*) >

*iū* or *iuw* : luceñ 350, suyte 2873.

*u* (spelled *ou* or *ow*) > *au*: *out* 45, *oure* 62, *gowne* 93, how 284.

*ō* (§ 2 h end) > *ū*: *bootes* 203, *tō dō* 942.

*o* (§ 2 h end) > *ō* or *ou*: *open* 10, *sq* 11, *shōn* 198.

NOTE 1.—In other words, there is little change in the short vowels, while all the long vowels have changed and tend to become diphthongs, especially in England, the long vowels (particularly *I* and *U*, not so generally *e* and *ō*) still being common in Scotland and the United States. Cf. p. 17 ft. nt., p. 18 ft. nt.

NOTE 2.—Observe particularly that ME *ō* > MnE *ū* (though still spelled “*o*” or “*oo*”), and ME *o* > MnE *ō* (spelled “*oa*” or “*o-e*”). The word *o* or *qn* ‘one’ and all its derivatives have the vowel *o*, though their MnE equivalents show various irregularities: *o* 304, *qqn* 317, *nqqn* 210, *anqn* 32, *allqne* 1633, *qqnly* 1373.

#### Diphthongs.

§ 15 *ai* and *ei* > *ē* or *ei*: *mayde* 69, *gay* 74, *grēye* 152, *deyntee* 168, *seint* 173.

*oi* remains *oi*: *point* 114, *oystre* 182.

*au* > *ā*: *ytaught* 127, *sauce* 129, *drawe* 396.

*eu* (or *ū*) and *iū* > *iū* or *iuw*: *nēwe*, 176, *rēule* 173, *Mūwe* 349, *vertuous* 515, *stature* 83, *Julian* 340.

*ou* > *ō* or *ou*: *though* 68, *bQwe* 108, *grōwe* 156.

NOTE.—Observe that *ai* and *ei*, though now pronounced alike, were distinguished in ME; in fact, we now sometimes write “*ai*” or “*ay*” for “*ei*”: *feith* 62, *seint* 173, *streit* 174. Observe also that ME *au* was a phonetic spelling, as in Latin and German, and had not yet gotten the vowel sound it has in MnE.

For *ē*, *ō*, *iū*, or *ei*, *ou*, *iuw*, see § 14 Note 1.

#### SPECIFIC CHANGES.

§ 16. There are many less general changes, that is, such as effect only a number of the words containing a certain vowel; but it would be out of place here to point out more than three or four of the most important.

§ 17. Vowels in closed\* syllables (and, by analogy, in related open ones), are sometimes shortened, particularly before dentals, that is, consonants made with the tip of the tongue (d, t, th, n): *breed* dēēd 147, *stede* 231, *reēde* 90, *hood* 103, *wood* *good* 183, *blood* 635; *brēθ* 5, *dēθ* but *hēθ* 605, *seith* 178, *seyde* 219, *dooth* 171; *hōte* 97, *leet* 128; *Mōnthe* 92, *wynd* 170, after *r* in *freēnd* 299 but not *fēnd*; *heeld* 176; *book* 185, *look* 289, *took* 303. Observe the shortening of *ō* before -ther: *anōther* 66, *brōther* 529; and of *ō* before -ng: *lōnge* 93, *strōng* 239.

§ 18. Lack of stress gives rise to slurred forms by the side of the full ones: *my* 21 now strong *mai* and weak *mi* or *ma*; sometimes one (often the weak) form prevails: *been* 85, strong *bin* in England, weak *bin* in America: *sayde* 70, generally weak *sed*; *you* 34, the strong *jū* > *jau* in early M<sup>n</sup>E as *thou* > *thau* § 14, but weak *you* C 108 (= *ju*) supplanted strong *jau*, and when it was stressed it got a long vowel *jū* (now often *iū*), that is, the very pronunciation the ME strong form had; in *koude* 94 the weak *u* has prevailed; observe weak *have* with *æ*, but stressed *behave* with *ē*; any and many now have *e* but stressed *manifold* has the regular *æ*.

NOTE.—If a syllable that was or might be stressed in ME is now unstressed, its vowel is not what would be expected by §§ 13–15, but usually the obscure vowel *ə*: *licour* 3, *men-cioun* 893, *frēdōm* 46, *Squier* 97, *licenciat* 220, *visage* 109.

§ 19. The sound *r* has always much affected preceding vowels; the chief cases are:—

(a) Before *r* and another consonant, *e* > *æ*, later *ā* (cf. *b* below): *sterue* 1144, *darknesse* 1451, *hertely* 762, *ferther* 36, *ferthyng* 255, *sterres* 268, *yerde smerte* 268, *Dertemouthe* 389, *werre* 47, see 2 and (e).

---

\*Cf. ft. nt. p. 23.

28 RELATION OF ME. VOWELS TO M<sup>n</sup>E. VOWELS.

NOTE.—In most classical words the *e* was retained or restored, and later (according to *b* below) changed to *ə*: *serued* 187, *certeyn* 375, *mercy*, 950, *seruants* 101. But even in these cases the rule (*e* > *a*) prevailed among the uneducated; and in a few usage varies, so *Sergeant* 309, *Clerk* 285, &c., while we distinguish between "parson" (person 478) and "person" (persone 521).

(*b*). Before *r* (but see note above)—

*a* > *ā*: *Arm* 393, *barre* 1075, and those in (*a*).

*ai*, *ei* (and sometimes *ɛ*) > *ɛ*: *faire* 94, *preyères* 231, *ther* 34, *er* 255.

*e*, *i*, *u*, *ii* > *ɔ*: *serued* 187 (cf. note above), *first* 44, *curteisie* 46, *purchas* 256, *worthy* 47, *worlde* 176, *Surgerye* 413.

NOTE.—But if there is no consonant other than *y* before a following vowel, the *a* regularly (§ 13) becomes *æ*: *carie* 130, *mariage* 212; and *e* remains *e*: *berye merye* 207.

(*c*) Observe the abnormal M<sup>n</sup>E vowel after *r* in *br̥qd* 155, *greet* 203.

§ 20. A following *l* and a preceding *w* have in many cases rounded the vowel *a* or *ā* to *ɔ* or *ə*: *smale* 9, *al* 10, *yfalle* 25, *palfrey* 207, *was* 43, *what* 40, *werre* 47 (*e* had become *a* by (*a*) above), so *were* 555. Be very careful not to introduce this pronunciation into ME.

§ 21. The standard form of to-day is not always the regular descendant of the form usual in Chaucer, but has been changed for some special cause or is a dialectic variant; hence the form shown by the modern word is not what would be expected by §§ 13-15: *gete* 291, *sn̥wed* 345, *tr̥uthe* 46, *embr̥quded* 89, *bar* 105, *gretteste* 120, *lenger* 330, *h̥eng* 160, *y̥ue* 223 (Chaucer uses *yue* for a rime 225).

## THE LOSS OF VOWELS.

§ 22. An unstressed vowel may be lost, particularly if next another vowel or a weakly stressed syllable. This is most apt to happen to the unstressed vowel that is produced with least displacement of the tongue, namely *ə*, written *e* in ME as in German, cf. § 4 Note 1.

NOTE.—Words that only occasionally lose final *e*, retain it at the end of a verse; the student will need to exercise special caution in this matter.

### Loss of Weak E.

§ 23. Unstressed *e* is generally silent under the following circumstances:—

1) When two adjoining syllables contain weak *e*, one *e* only is sounded: *lōued(e)* 166, *sēmed(e)* 39, *bismōt(e)red* or *-er(e)d* 76, *feth(e)res* 107, *fyng[e]res* 129, *neu(e)re* or *neuer(e)* 70, *wedded[e]* 868 (cf. ten Brink top p. 140; *ther* has evidently been lost before the “*the*”).

2) After an unstressed syllable that may bear the stress: *pilgrim(e)s* 26, *ma'ner[e]* 71 but *manē're* 140. (In *bod'yes* 942, 944, &c., *i* or *y* is ~consonantal and not syllabic, cf. § 32.) Similarly after secondary stress: *shirrēu(e)* 359.

3) In words that ordinarily have little stress, for ex., prepositions, possessives, demonstratives, auxiliary verbs, &c.: *befor(e)*, *thēr(e)*, *hēr(e)*, *his(e)* 1, *our(e)* 34, *hir(e)* 139, and the other possessives, *swich(e)* (unless adjective plural) and *which(e)* (unless adjective plural or after “*the*”) 40, 578, and

sōm(e) and this(e) 701, 2570; regularly wēr(e) 23, nēr(e) 875, often hau(e) 35, 886, hadd(e) 64, 146 (but hadde 164, &c.), koud(e) 130 (but koude 95).

4) When final in words having a short high vowel (i, u) followed by a single consonant: sōn(e), wōn(e) 1040, often lōu(e), and the past participles driu(e), writ'e), cōm(e) 77, &c. (but also driuen, cōmen 671, &c.); usually sounded in infinitive cōme, yiuē for yiuen, &c.

5) Usually in French words ending in stressed -ye, -aye, -eye, &c.: vileyn(e) 70, curteisI(e) 132, remedI(e)s 475, but fantasye FA 51, and probably not at the end of a verse: melodye 9, scōleye 302, &c. For unstressed -ye cf. § 27.

6) In the ending -en after a vowel or l or r: yshqrn 589, bōrn 87, woln, hān, leyn, slain 63, &c.

7) Occasionally medially: usually sēmely 123, 136, occasionally seem(e)ly 751 and always seemliest, usually nātheleēs 35, 2472, and trēwely 761, 1268, &c., but trēw(e)ly 481, &c., also lyu(e)ree 363, sōu(e)reyn 67, nām(e)ly 1268. The medial e is always silent in for(e)ward 829, eu(e)ry 3, 6, 15, &c., and usually in qu(e)rich 241.

8) Occasionally in other cases, where the metre requires its silence, especially before a weak syllable followed by a heavily stressed one: lōu(e)d for lōued(e) before weak pronouns 206, 334; &c., belōu(e)d and 215, lōu(e)st my 1581, fall(e)th nat 1669, nqbl(e) ensample 496, delyu(e)r(e) and 84, pēpl(e h)is āpes 706, qu(e)r al thēr 249, 547, qu(e)r (h)e kan 588, 622; also gown(e) 93, tym(e) 102, &c.

9) Before a word beginning with a vowel (a silent h is, of course, not counted), final e is elided: see the examples in lines 382-3, also morw(e) a 334, Aristotl(e) and 295, festn(e h)is 195, ordr(e h)e 214, 220, Alisaundr(e h)e 51 (in tendre herte 150 and the like, the h is stressed and not silent, and the -e is therefore not elided), fith(e)l(e) or 296, qu(e)r(e h)is 335, 343, &c.

M 70 11

(a) The -e of ne 'not' (for nē 'neither' see § 24) was always elided: N(e) I n(e) axe 2239, nys 901, I nam 1122, n(e h)ath 923, and with lost w: nēre 875, nas, n(e w)ölde 550. (b) The -e of 'the' was almost always elided: th(e) üsage 110, thilke 182, thencrees 275, &c.; the -ē of the 'thee' occasionally, cf. § 24.

#### Other Cases of Loss of Vowel.

§ 24. 1) Occasionally the final vowel of a weakly stressed monosyllable was elided before another (especially an unstressed) vowel: m(ē) awrēke C 11, t(ō) abyden 927, t(ō) h)ave 2239. The ē of nē 'neither' is usually retained: nē of estaat nē äge 2592; but it may be elided.

2) The i of weak "is" was frequently dropped, especially after "that" and "this", as in M<sup>n</sup>E: that (i)s 180, thi(s i)s 1091, pouertē (i)s C 35. Similarly, it = I it 829.

3) A weak vowel is apt to fall out, especially if preceded and followed by the same consonant: in (a)nōther 1401, th(e) thrqte 2458; par(i)sshe 491 (but parisshe 494), pos(i)-tif 1167, the Latin Si(g)n(i)ficāuit 662, usually ben(e)d(i)-cīte 2115 (but benedicite 1785), always Ier(u)salem 463. Observe Caun'terb(ū)ry 16, 22, with silent ü and stress as in present British English, but Caun'terbū'ry 27 with ü and American stress.

## THE PRONUNCIATION OF THE CONSONANTS.

---

§ 25. In general the consonants were pronounced in ME as in M<sup>n</sup>E; it will be most necessary to observe the following points in learning ME pronunciation.

### c.

§ 26. As in M<sup>n</sup>E, c was back (or gutteral), = *k*, before consonants and back vowels (a, o, *u*, *u*): *crulle* 81, *acordaunt* 37, *caas* 585, *curteisle* 132; and front (or palatal), = *s\**, before front vowels (e, i or y): *spāce* *pace* 36, *Prūce* 53, *certeinly* 235, *Maunciple* 567. For ci + vowel, see § 32 Note. So sc before a front vowel (probably also in *sclendre* 587) was sounded *s*: *science* 316, *conscience* 142, cf. § 32 Note.

### ch.

§ 27. Old-English *c* before old front vowels had also become palatal and was sounded *tʃ* (similarly Latin *c* in some cases); as this sound was written “ch” in French (chiualrie 45, Chapeleyne 164), it was also written ch in native English words: *everychon* 31, *whiche* 40, *swich* 43. Double ch was written cch: *recchelēs* 179, *wrecche* 931.

ME ch must never be pronounced *f*, or like English sh, as is done in M<sup>n</sup>F, cf. § 2 *k*; nor like *k*.

---

\*This *s*-sound of *c* occurs only in French words; Latin *c* before front vowels became palatal, this became *ts* (as still in German) and this became *s* (as in French and English).

## g.

§ 28. 1) ME, like M<sup>n</sup>E, *g* was regularly front (or palatal), that is, = *dʒ*, as in *gin*, when before a front vowel (e, i or y) in a word from the French: *gentil* 72, *gypoun* 75, *Age* 82, *barge* 410, *habergeoun* 76 (in which the e is silent); also in some native words; *senȝen*, *egȝe*, FA 19, &c. This *g* Sweet prints with a dot above it, to suggest *j*.

2) Elsewhere *g* was back (or guttural), like *g* in *go*—French: *glorie* 870, *gōuernyng* 599; English: *God* 533, *gōqn* 450, *Syngyng* 91, *gesse* 82, *bigynne* 428, *grēce* 135, *drōgges* 426, *legges* 591, *daggere* 392. The *g* from older *gu* in a few French words is also guttural: *gise* 663, *gy(d)e* 1950, *gyle* 2596; also in *ger-* from *gr-*: *gerner* 593, *Gernāde* 56.

NOTE 1.—Thus *g* was not yet silent in long, *sing*, &c., but pronounced just as it still is in *longer*, *finger*, &c.: *yōnge* 7, *lōngen* 12, *syngyng* 91.

NOTE 2.—The *g* of *gn* was already silent: *digne* 141, *signe* 226, *cōpaigny* 24. In a few cases the *g* has been restored in M<sup>n</sup>E through classical influence: *dignity* from ME *digni-tee*.

## gh.

§ 29. ME *gh* was a back (or guttural) sound after back vowels (a, o, u): *ytaught* 127, *ynogh* 373, *thoughte* 385; and a front (or palatal) sound ~~before~~ front vowels (e, i or y): *knyght* 72, *wight* 280, *heigh* (or *high*) 1065. The sounds and their use are just the same as those of German *ch* in *Bruch* and in *tch*. They may be heard and learned by whispering *koo* and *kee* and dwelling on the sound following the *k*.

NOTE 1.—ME *gh* is usually dropped between vowels, a preceding i or u being then written y or w (§ 2 e): *heigh* 316, plural and adverb *hȳe* 2463, 271 (whence, by analogy, singular *hȳ* 306), *hȳer* 399; *ynogh* 373, pl. *ynowe*; compare German *hoch*, but *hohs* and *hōher* with silent *h*.

NOTE 2.—In M<sup>n</sup>E *gh* has become silent (igh becoming *i* and and then *ai*: *nyght* 10) or *f*: *ynoghi* 373.

j.

§ 30. Latin *j* had in OF become *dʒ*, which sound it has retained in English in words derived from the French (avoid the M<sup>n</sup>F sound *ʒ*): *Iulian* 340, *Iolitee* 680, *Iapes* 705. For the spelling see § 2 *g*.

h.

§ 31. *H* was sounded as it is to-day. It was silent:—

1) In some words from the French-Latin: *hostelrye* 23, *honour* 46, *honeste* 246; but sounded in French words from Celtic, &c.: *harneised* 114.

2) After *t* in foreign words (cf. § 33<sub>3</sub>); also in *Ihesu* 698, *Iohn Pro6*.

3) As to-day in unaffected speech, in unstressed words not beginning a clause: *hē* 45, 51, *his(e)* 1, 5, 8, *hym* 102, *hem* 31, *hath* 18, *hadde* 64; and in cases like *shuld(e)r* (*h*)*angyngē* 2163, cf. the cases in § 32.

NOTE.—Silent *h* has been restored in M<sup>n</sup>E pronunciation in some words, for ex., *humble*, *humor*, &c.

#### Consonantal *i* and *u*.

§ 32. 1) Before unstressed *e*, unstressed *i*, or *y*, is usually unsyllabic, *u* occasionally so—English: *berye* *merye* 207, *bisiēr* 322, *lōuyere* 80, *tarien* 2820, *lādyes* 898, 991, 999, but *lādy'es* 996; *Wylu(gh)* *Elm* 2420, *yel(o)w* as 675; French: *Apothecāries* 425, *myscarie* 513; *perpetuelli* 1024, and with elided -*e* (§ 23): *glōri(e)* and 870, 917, *victōri(e)* and 872, 916, *victōri(e)* of 1235, *solitāri(e h)ē* 1472, *contrāri(e)* of 1667, 3057, *studi(e h)ē* 1530, *lili(e)* *vpon* 1036, in: *Yif mē* the *vic'tōrie* I as'ke thee *nāmōre* 2420, -*ie* I = consonantal *y*; *statū(e)* of 2265, 975. In *hostelrye* 23, *curteisie* 46, &c., the *I* is stressed; in *conscience* 526, *pacient* 415, &c., the *e* is often stressed,

2) Before other vowels, i or y is most commonly syllabic, the following vowel being capable of stress: nācions 53, cordial 443, Religioun 477; still, specially 15, glōrious 1955, with consonantal i.

NOTE—Avoid giving to i in this situation the modern sound of / or ɔ: specially 15, cordial 443.

f, s, th.

§ 33. 1) The fricatives f, s and th were voiceless (as in *off*, *so*, *thick*,): hymself 219, ful sēmeely 123, inspired 6, QQth 120, thynketh 37, brēþth 5; and so in compounds, &c.: bifel 19, yfalle 25;—except between two vowels or a vowel and a voiced consonant, and then they were voiced (as in *of*, *rose*, *the*) and f was usually written u: so u in hymseluen 184, siluer 115, s in ryse 33, ȣsed 29, th in bāthed 3, oother 113, wōrthy 43.

2) Fricatives are now voiced in unstressed syllables and words. Such forms as quod 1224 and bidēne, for queth and bī the ȣne, show us that this voicing had begun in late ME; but the d as clearly shows that the voiced fricative was not yet used in stressed forms (London *Academy*, April 25, 1891). We are therefore justified in assuming that when unstressed (that is, in suffixes and in weak forms of such words as his 8, 47, as 49, 69, was 32, 68, is 229, with 79, 81, of 2, 82, than 42, 98, thēr 34, 43, this 36, 64, that 41, 45, the 2, 44 and nātheleęs 35), fricatives were voiced (or at least whispered, § 1), but were voiceless when stressed, and so in monosyllables in rime (his 55, 73, as 20, 34, 89, was 47, 51, is 4, 69, with 1, 5, 31, of 2676, though 68, thērtō 48, that 1, 36, 43, the 38, they 59, 81). This distinction between voiced “with” (*with all'*) and voiceless “with” (*with' them*) is still made by many Americans. The voicing of unstressed wh- probably began later.
